**MORE COMMITMENT.
LESS MONEY.**

Now more than ever, farming in Australia has become highly dependent on machinery cost and reliability. This is why OzValue Ag is committed to bringing the farmers of Australia, well priced quality machinery.

With an ever expanding range, the team at OzValue Ag is continuing to introduce such equipment to Australia. OzValue Ag is able to source machinery from manufacturers around the world and sell direct to the farmer eliminating importers and distributors.

Put simply this all results in a lower price for the farmer.

Donder Spreaders

New for 2016

Automatic Rate Controllers

As farming progresses, so do the Donder Fertilizer Spreaders.

Donder are able to bring a simple machine, with all the features and technology needed in today's conditions, at a fraction of the price of many competitors, without comprising safety or quality.

The CGSA series is not just about saving money, but applying fertilizers as evenly and precisely as they should be.

Adjustable spread width

With the ability to adjust spreading widths infinitely from 10-36 metres, the CGSA series is versatile enough to suit many types of farmers and different farming practices.

Disc and blade sets are all available in:

- 10 - 16 metre
- 18 - 24 metre
- 24 - 36 metre

More Choice. Less Money.

Model	Width (mm)	Length (mm)	Height (mm)	Hopper Capacity (litres)	Weight (kg)	Working Width (mm)	Hydraulic Control	Inox Disc	Inox Throwing Wings	Inox Floor Hopper

CGSA 4000	3181	1496	2218	4000	720	10/36	STD.	STD.	STD.	STD.

Specs are approximate and subject to change

CGSA Pro

The new Donder CGSA Pro series offers a double acting cylinder system and independent rate control shutter. This allows the on off shutter to work independently and is capable of the rate controller upgrade.

CGSA ProPlus

The CGSA ProPlus is the new flagship model from Donder. Featuring a double acting shutter cylinder and electric actuator for 'on-the-go' automatic rate adjustments.

Smart Fertilizer Control With CGSA ProPlus

The Donder Smart Fertilizer Control (SFC) gives the ability to vary rates whilst on the move. The automatic system will keep the spread rate consistent over many speeds.

HyComfort Electric 3-Way unit

Donder offers the HyComfort system in conjunction with the limiter options. This allows the limiters to be raised, lowered, and adjusted without leaving the cabin and all through the control of one remote bank.

Limiter

Perfect boundary and side spreading

Water course spreading and tram tracking require the use of a limiter, this allows boundary spreading to be carried out much more accurately and efficiently, disallowing fertilizer to be thrown too far to the next paddock, field, or water course.

More Features. Less Money.

Flow Regulator

The flow regulator allows fertilizer to flow evenly and consistently whether the hopper is full or nearly empty.

Sieve

A swing-away hinged sieve prevents oversized fertilizer and unwanted objects from entering the metering area of the spreader.

Rate Adjuster

The simplistic rate adjuster provides a consistent spread rate, without the hassles of electronics or complex moving parts.

Heavy Duty Gearbox

Maintenance free heavy duty oil bath gearboxes with stainless steel components, ensure machine longevity and a stress free operation.

Mud Guards

Plastic moulded mud guards prohibit mud and water from building up on spinners in wet conditions.

Tail Lights

There is no compromise when it comes to safety with the CGSA series, all fitted with tail lights as standard.

Hydraulic Gate Control

The control gates are opened via the tractor hydraulics and capable of opening and closing both sides of the machine separately on the go.

Flip Over Tarp

A practical flip over tarp, opening to two thirds of the spreaders length, prevents mud, rain and other object from entering the spreader during operation.
